

# Facts You Need to Know

## Weather

Our turf gets installed in the mountains, where rain and snow drain very well with no flooding issues. Wind is not a worry if the installation has been done properly. In the hot Southwest part of the US, the grass can get quite warm to the touch during the midday direct sun. The grass does not retain heat in the shade or darkness like rock does. The turf can easily take even the hottest direct sunlight without damage providing that there isn't any strong reflection or sun magnification.

## Pet Odor

The best solution for getting rid of pet odor is to use Zeolite. It works as a molecular sieve creating a cation exchange which occurs when two or more positively charged compounds or elements exchange places on a negatively charged host. This exchange process removes charges and essentially removes ammonia in pet waste.

There are some pre-made Zeolite products available on the market. They can be purchased through us.

Hosing down an odorous area with vinegar is also an effective way to eliminate pet odor.

## Reflection Of Sunlight

Beware of highly reflective windows on the south or west side of your home. In certain conditions, sunlight hitting these windows has created a "magnifying glass effect", which acts much like a laser and will melt your turf. A coating on the outside of the window will prevent this.

**Resource/Valley** cares about the environment and we are proud to contribute to the greening of our planet earth. Our **lead-free** synthetic turf products are safe for both humans and animals and ideal for residential and commercial landscapes, pets and sports fields. Our products have passed vigorous tests and far exceed government standards (Test results provided upon request). Our product line ranges from 40oz to 102oz (face weight) with variable color/shade selections. We provide a 10-year warranty (turf only) with a 20-25 year projected life under normal use.
